	State Engineer				

Attachment

The attached application for the appropriation of ground water is for the purpose of supplying water for the construction and operational phases of the Mx Missile System in Coal Valley. The attached application is one of nine for appropriation of ground water in the valley. Each application is for 324 acresists acresist acres

The ground water for construction will be used for road compaction, dust suppression, shelter construction, miscellaneous structures, and possibly construction plants and camps. Ground water for the operational phase will be used for maintenance and surveillance facilities personnel as well as other possible support systems.

The place of use of the ground-water, as indicated on the attached water rights survey map, covers the entire valley in anticipation of the probably broad areal extent of construction activities. It is possible that once the construction planning has been completed, a request may be filed to change the point of diversion on the attached application to a more strategic location; however, the above stated total quantity of ground water will remain the same.
